**Classification:**  
- **International:** G06K19/00  
- **European:** G07F7/00C, G07F7/08C8, H04M1/275, H04M17/02B, H04M1/675  
**Application number:** FR19870010083 19870707  
**Priority number(s):** FR19870010083 19870707

**Also published as:** WO8900320 (A1)**Abstract of FR2618003**

A memory card (1) with incorporated integrated circuit (2) is provided with circuits (3-5, 11, 13) for dialling a number to be called and with prepayment microcircuits (14) to account for the durations of the calls to predetermined correspondents. It is shown that this type of card can help resolve the problems of vandalism in public telephone booths, reduce the costs of telephone calls in private firms, and may provide considerable assistance to young children, accident victims, blind and handicapped persons in general, when telephoning.
